1. This Office Action is an answer to an Amendments to the Claims filed on 5/26/2010.
2. Claims 1-5, 8-10, 12, 14, 23, 24, 26, and 27 remain in the application, wherein claims 1-5, 8-10, and 27 have been withdrawn. The prior restriction/election requirement was made final because of different scopes are claimed (i.e., method steps vs. physical components claims in a unique invention: a method claim is not automatically equivalent to a concrete physical system claim, it must be structural tied to a physical system) therefore different search strategies must be done to completely cover all claimed subject matters; further, a wireless communication between a call center and a telematic unit (e.g., a cell-phone) have been known, a cell-phone is also considered a telematic unit by itself (not necessary requiring a vehicle).
  - claims 3, 5, and 8 are amended to include “fixed status” of an object; the examiner submits including this feature does not closely tie a claimed method to a claimed structures.
  - applicant argues that “the telematics unit determines whether the associated components are in a modifiable state” – this is not an inventive concept since determining if a condition is changed/modified/edited is merely an “if condition” that has been implemented with computer software.

***Examiner's amendment:***

3. An examiner's amendment to the record appears below. Withdrawn claims 1-5, 8-10, and 27 now would be canceled for this allowance. Should the changes and/or additions be unacceptable to applicant(s), an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Claims 1-5, 8-10, and 27 are cancelled.

***Allowable subject matter***

4. Pending claims 26, 12, 14, and 23-24 are patentable over two cited references of Matula et al., and Rigo et al., because these prior art do not make obvious a system for providing vehicle settings for a telematics unit in a mobile vehicle, the system comprising:

- a call center configured to receive a vehicle settings update signal from the telematics unit; a voice portal configured to provide interaction between the mobile vehicle and an application operating within an application server at the call center to determine a download status of the telematics unit and associated components, wherein the download status is a fixed status requiring the mobile vehicle to maintain a stationary period for a predetermined fixed time period; a database for storing the vehicle settings when the download status of the telematics unit and associated components is negative; and  
a modem bank for transmitting the vehicle settings from the call center to the telematics unit when the download status of the telematics unit[[s]] and associated components is positive, wherein if the download status is positive, the mobile vehicle has maintained the stationary position for the predetermined fixed time period, and wherein the transmitted vehicle settings are selected from modifying power train behavior, modifying seat behavior, modifying mirror behavior, and combinations thereof.

wherein computer codes configured for:

a web portal interface configured to transmit processing a user preference to the call center prior to the call center receiving the vehicle personalization settings update signal; and a voice portal configured to provide the interaction between the mobile vehicle and the application operating within the application server at the call center to determine a store status for the vehicle

settings when the download status of the telematics unit and associated components is negative.

*Conclusion*

5. Claims 26, 12, 14, and 23-24 are allowed, they are renumbered as claims 1-5.
